Twingo 1 (C06) Door handle installation instructions	
	Remove the bolt from the middle of the original door handle.
	Pull the handle from the back until you can see both circled clips outside the door card.
	While pushing the door handle downwards, turn it 90 degrees counterclockwise to remove the hook out of the door handle.
	Follow the same steps backwards to install the new door handle. Loop the hook to the handle, push backwards and turn 90 degrees clockwise to hook it in place.

	Push the new door handle in place and align to the door card. Use the newly provided bolt to install in place.
	Test the new door handle.
